

Serghei Mangul

Data visualization using python

Visualization via python

- Pandas
- Seaborn

Seaborn

seaborn: statistical data visualization

- **Seaborn** is a Python data visualization library. It provides a high-level interface for drawing attractive and informative statistical graphics
- Allow to generate publication quality figures using few commands

pandas

$$y_{it} = \beta' x_{it} + \mu_i + \epsilon_{it}$$

Pandas

- **Pandas** is a software library written for the Python programming language for data manipulation and analysis
- Particularly useful for .csv files
 - Any .xls file can be converted to .csv by using 'Save as' option

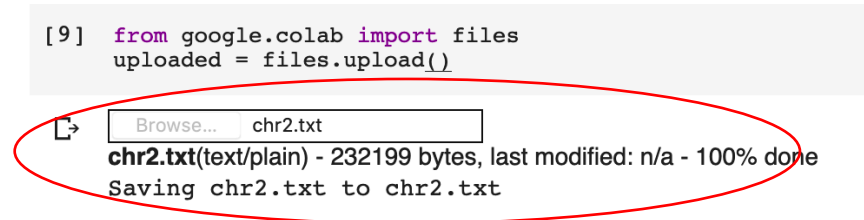

Upload files

from google.colab import files

uploaded = files.upload()

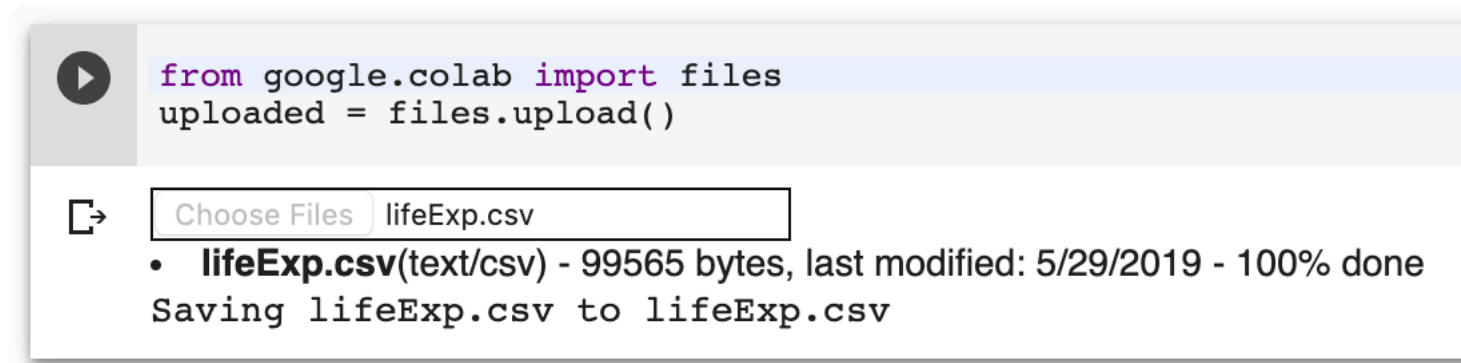

Select file you want to upload

Confirmation that the file was successfully uploaded

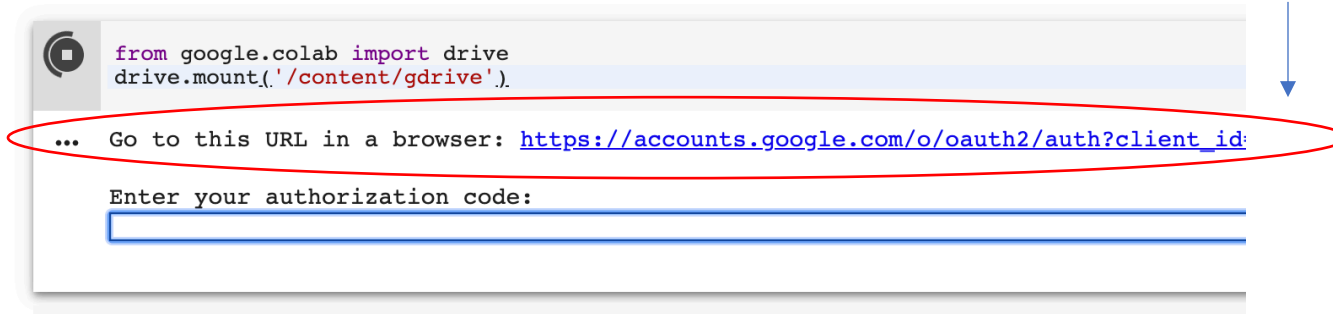

Upload file to Colaboratory - Google

```
from google.colab import files  
uploaded = files.upload()
```

Download files

```
from google.colab import drive  
drive.mount('/content/gdrive')
```

Google Drive File Stream wants to access your Google Account

 smangul@g.ucla.edu

This will allow Google Drive File Stream to:

-  See, edit, create, and delete all of your Google Drive files 
-  View the photos, videos and albums in your Google Photos 
-  View Google people information such as profiles and contacts 
-  See, edit, create, and delete any of your Google Drive documents 

Make sure you trust Google Drive File Stream

You may be sharing sensitive info with this site or app. Learn about how Google Drive File Stream will handle your data by reviewing its terms of service and privacy policies. You can always see or remove access in your [Google Account](#).

Connect notebook with Google Drive

The screenshot shows a Google Colab notebook cell. The first line of code is `from google.colab import drive` and the second line is `drive.mount('/content/gdrive').`. Below the code, there is a message: "Go to this URL in a browser: [https://accounts.google.cc](https://accounts.google.com/ConnectApp?app=colab)". Below this, it says "Enter your authorization code:" followed by a text input field containing 20 dots. A blue arrow points from the text "Paste and click ENTER/RETURN" to the input field.

```
from google.colab import drive
drive.mount('/content/gdrive').
```

... Go to this URL in a browser: <https://accounts.google.cc>

Enter your authorization code:

.....

Paste and click
ENTER/RETURN

```
%%bash
```

```
ls
```

```
cd gdrive/My\ Drive
```

```
ls
```

```
gdrive
```

```

Read csv file using pandas

```
import pandas as pd
df = pd.read_csv('lifeExp.csv')
df.head()
```

```
import pandas as pd
df = pd.read_csv('lifeExp.csv')
df.head()
```

	Unnamed: 0	country	year	pop	continent	lifeExp	gdpPercap
0	0	Afghanistan	1952	8425333.0	Asia	28.801	779.445314
1	1	Afghanistan	1957	9240934.0	Asia	30.332	820.853030
2	2	Afghanistan	1962	10267083.0	Asia	31.997	853.100710
3	3	Afghanistan	1967	11537966.0	Asia	34.020	836.197138
4	4	Afghanistan	1972	13079460.0	Asia	36.088	739.981106

Visualize data as Stripplot

```
import seaborn as sns

sns.catplot(x='continent',
            y='lifeExp',
            data=df, jitter='0.25')
```

Visualize data as Boxplot

```
import seaborn as sns\n\nsns.catplot(x='continent',\ny='lifeExp',\ndata=df,kind='box',height=4,\naspect=1.5)
```

Visualize data as violin plot

```
import seaborn as sns\nsns.catplot(x='continent',\ny='lifeExp',\ndata=df,height=4,aspect=1.5,kind=\n'violin')
```

Save as .png or .pdf file

```
import matplotlib.pyplot as plt
import seaborn as sns
g=sns.set_style("white")
g=sns.set_context("paper")
g=sns.catplot(x='continent', y='lifeExp',
data=df,height=4,aspect=1.5,kind='violin')
g.set(xlabel='Continent', ylabel='Life expectancy')
g=sns.despine()
plt.savefig("./gdrive/My Drive/lifeExp.png ")
```

Adjust size of the figure

```
import matplotlib.pyplot as plt
import seaborn as sns

g=sns.set_style("white")
g=sns.set_context("talk")

g=sns.catplot(x='continent', y='lifeExp',
data=df,height=4,aspect=3,kind='violin')

g.set(xlabel='Continent', ylabel='Life expectancy')

g=sns.despine()

plt.savefig("../gdrive/My Drive/lifeExp.png")
```
